Steven Gin

Senior Staff Data Scientist

650-701-6117 | verdananew@gmail.com | stevengin.com

SUMMARY

Senior Staff Data Scientist and former Data Science Manager with 10 years of experience in ecosystem measurement, experimentation, and forecasting at Meta scale. Ecosystem tech lead across WhatsApp Analytics (300-person organization): chairs the senior IC forum, leads AI for Analytics, owns WhatsApp-wide experimentation, logging, dashboard, and agentic infrastructure, and regularly presents to WhatsApp C-suite leadership.

EXPERIENCE

Meta | Senior Staff Data Scientist, WhatsApp Ecosystems (2024–Present)

- Own, modernize, and maintain WhatsApp's core experimentation, logging, dashboard, and agentic data-access infrastructure serving all features platform-wide.
- Scaled WhatsApp experimentation from 11,000 tests/year to a projected 25,000 this year, with more rigorous holdouts, fewer regressions, and offline experimentation on devices enabled.
- Lead AI for Analytics at WhatsApp, standardizing tooling, productivity measurement, evals, semantic models, and an experimentation agent.
- Chair the senior IC forum and establish analytical standards across WhatsApp Data Science; mentored 10+ senior data scientists to Staff and lead technical code/design reviews.
- Regularly present to WhatsApp C-suite leadership — forecasting standards, user definition, and a deep dive into US growth rates.
- Built an ML model predicting a user's country of residence, establishing the core location logic across WhatsApp (replacing legacy phone-number logic); powers feature gating, experimentation, and reporting for all users platform-wide.
- Used difference-in-differences to show migration policy affected the non-English-speaking population in the US.
- Measured feature incrementality using synthetic control and matching; blocked multiple teams from launching non-incremental features, protecting user experience and preventing metric regressions.

Meta | Data Science Manager, Family Ecosystems (2022–2024)

- Managed up to 11 data scientists on Meta's most technical problems — competitive impact, forecasting, and analytic efficiency.
- Head of cross-company forecasting. Built forecasting framework and infrastructure used throughout Meta, improving accuracy across the entire company (Facebook, Instagram, WhatsApp, Finance and Reality Labs).
- Launched Common Analytics to standardize code reuse across data science, accelerating analytics velocity and saving hundreds of hours of DS time across teams.

Meta | Staff Data Scientist, Facebook Ecosystems (2019–2022)

- Delivered key executive analyses on US Elections, Covid Impact, and Young Adults, steering C-suite product strategy, integrity policy, and resource allocation.
- Overhauled and led FB growth forecasting, building the largest forecasting infrastructure in Meta responsible for projecting over 12k unique time series.
- Developed an uplift and churn prediction model supporting key machine learning production models across Meta, including SMB ads and Facebook notifications.

Dialpad | Data Science Analyst (2018–2019)

- Built the company's data warehouse and pipelines from scratch, powering core business analytics and executive decision-making.
- Constructed an isolation forest classifier to detect fraudulent users, fully automating manual fraud review.
- Developed an ASR (speech recognition) model for company name pronunciation, improving transcription accuracy.

Best Buy | Logistics / Business Process Analyst (2016–2018)

- Optimized warehouse routing and labor productivity models, driving a 30% efficiency gain across the supply chain.
- Built capacity models to optimize throughput and allocation across the national logistics network.

PUBLICATIONS

Co-author, "Forecasting@Meta: Balancing Art and Science" (with Kevin Birnbaum) — Analytics at Meta, Medium, May 2024.

EDUCATION

University of Ottawa — M.A. Economics (2014–2016)

University of Manitoba — B.A. (Honors), Economics and Linguistics (2010–2014)

SKILLS

Machine Learning: Production ML — churn prediction supporting SMB ads and Facebook notifications; classification (isolation forest classification); NLP for speech recognition.

Statistics & Causal Inference: A/B testing • Difference-in-differences • Instrumental variables • Matching • Synthetic control • Uplift modeling • Marketing mix modeling • Bayesian methods

Programming & Data: Python • SQL • C# • JavaScript — data warehouses and pipelines built from scratch; forecasting infrastructure at Meta scale (12k+ time series)
